

Immunomodulator

Immunomodulating and Anti-Inflammatory Properties of Monosodium Luminol

- The Ministry of Health of Russian Federation authorized Monosodium Luminol on March 31, 1997 as an anti-inflammatory and immunomodulating medication for the treatment of inflammatory diseases of the gastrointestinal tract
- It has a fast pharmacological action as a positive effect was expressed by the disappearance of intoxication symptoms and diarrhea within the first days of endotoxemia; therefore it can be used in cases of acute intestine infections
- Under the influence of Monosodium Luminol, a faster normalization of intraleukocyte components level of leukocyte microbicide system is achieved which indicates the efficacy of a Monosodium Luminol application in cases of acute intestine infections
- Monosodium Luminol proved to be well tolerable, effective, and safe in numerous clinical trials
